Dealer notes

2018 Eastract Tracked Robot Car Loading Device. This remote-controlled robot recovery vehicle is amazing. Makes loading a car in any type of off-normal ground situation a breeze, also excellent for repossessions in tight areas, parking decks or just simply moving vehicles out of a low height restricted area. Lots of videos online, but please feel free to watch ours as well to see how this works. This has a hydraulic winch system with extremely low hours, gas operated with a Vanguard 35 hp engine, LED working lights, loading lights, and Beacon Lights. You ask how you would use this unit. let's just say an electric vehicle breaks down and is immobile. You go to the site with this loaded on your rollback load the car with ease and less than a couple of minutes, drive the robot machine back onto your Rollback, strap down, and then take the car to the dealership. Drive the car into the dealership on the road, robot, and go ahead and put it right on the lift for repairs. The other feature is a car disabled in a parking deck, just as easy as pie drive right up swivel around load pull it right out of the parking spot drive it back to the surface for a rollback to approach and load or wrecker. This will go where no other Rollback or Wrecker-type device will. The opportunities are endless and other than new and importing it from another country. This is the only unit currently available for sale across the nation.
